

# Have Your Child Tested for Lead

## How?

Your doctor can conduct a simple finger stick test that can check for lead!

## When?

Test 6-month to 2-year-olds for lead once a year if you live in a high-risk area!

Test 3- to 6-year-olds if they have not been tested before!

Test for lead during the summer months since lead poisoning occurs more in summer!

## Where?

Go to your doctor or the local health department for lead testing!

See your doctor. And remember to ask for the lead test results!
